

Simulated Training Products

CITT has developed two simulated training products that respectively underpin the knowledge for ICTWHS204 Follow work health and safety and environmental policy and procedures and BSBCUS201 Deliver a service to customers. This project was supported by the *Victorian Government through the Workforce Training Innovation Fund (WTIF)*. The products have been designed for both learners and trainers and enables individuals to proceed with learning at their own pace with support from the workplace or Registered Training Organisation personnel.

The Simulation tools have been developed using the industry leading Storyline 360 tool from Articulate. They have been developed as a training course that is SCORM compliant, that can be uploaded into any compliant Learning Management System (LMS) and viewed on devices ranging from desktops in a training centre to Smart Phones (as a mobile friendly website) while on the job. This provides the best experience for the widest possible audience and allows RTOs and Enterprises to provide the training and tracking whenever and where ever it is needed.

Refer to “Request for Simulated Training Tools” form below
